

WSL+Vscode 调试go

1.安装 dlv

```
go install github.com/go-delve/delve/cmd/dlv@latest
```

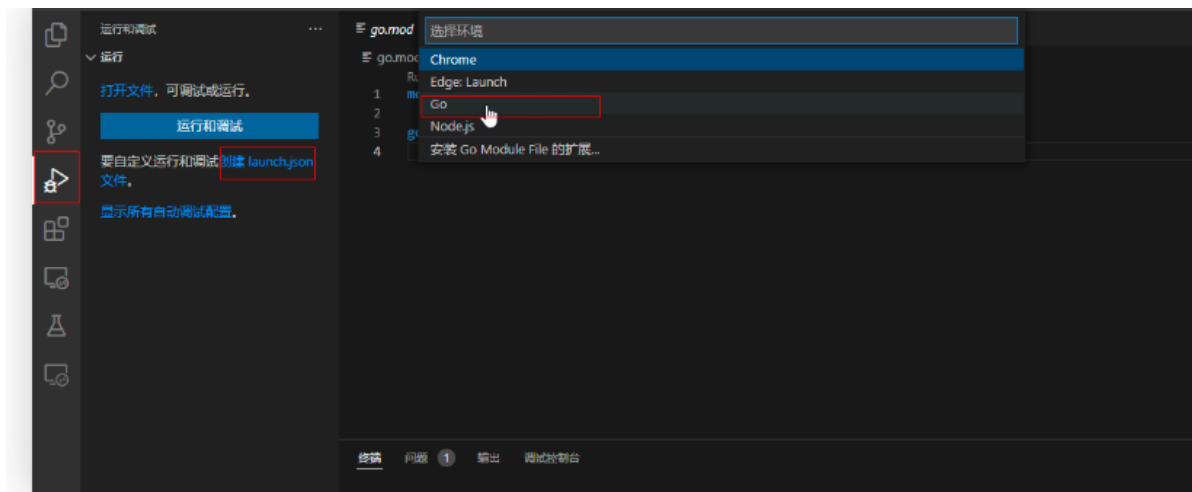

2.打开需要测试的文件，f1 或者 shift+ctrl+p, 键入 test

3. todo 部分补充完整(可不做)

```
tests := []struct {  
    name string  
    args args  
    want int  
}  
  
// TODO: Add test cases.  
{ "first test", args{4}, 5 },  
  
for _, tt := range tests {
```

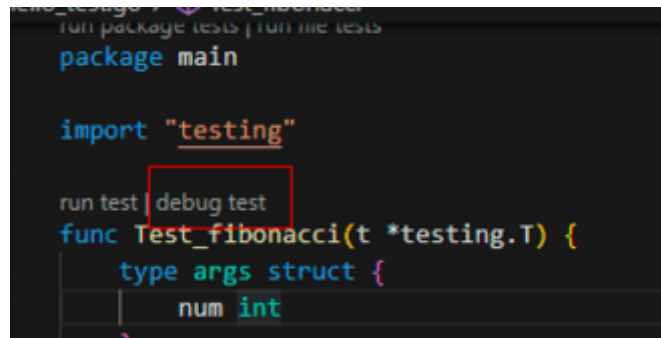

4.生成配置文件

5.更改配置 (可不做)

```
{  
    "name": "Connect to server",  
    "type": "go",  
    "request": "attach",  
    "mode": "remote",  
    "remotePath": "/",  
    "debugAdapter": "dlv-dap",  
    "port": 12345,  
    "host": "127.0.0.1"  
}
```

6. 添加断点，点击 debug_test 开始 debug

7. 终端执行

```
-> % dlv debug --headless --listen=:12345 --log --api-version=2
```
